

Hw02 write up

- What corrections did you have to make?

At first, there were a lot more alerts but I added a lot of alt text to my images. These images include: suggestions, stories, and the cards.

- Given that the photos and captions rely on user-generated content, do you think that the accessibility problems are all solvable? Why or why not?

I'm sure there is a way because if there isn't, the websites would be considered not accessible which is illegal. Maybe there's some kind of AI related thing that recognizes images/videos?

- Do you think your website is usable if you turn off the CSS? Why or why not?
 - Yes, unreadable. The CSS file is what has everything codes to be placed nicely. Without it, it would be just a long page of disorganized content.
- Do you think your website is usable if you turn off the images? Why or why not?
 - I don't think it would be unusable but I do think it would be less clear as to what the website's purpose even is. The usernames would still be there though.
- Submit a screenshot of your Wave report
 - On next page.
